

CLOUD

✓ *Always available, flexible and secure - software from the cloud opens up new ways of working.*

Cloud services have established themselves in the private sector. With the increasing trend towards location-independent working, cloud solutions are also gaining importance in business IT. Data can be accessed either via remote desktop programmes, web browsers or mobile devices such as smartphones, tablets, etc.

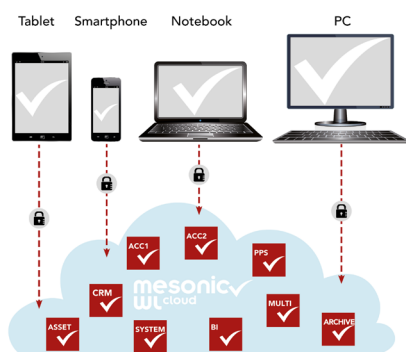

WinLine cloud is a complete solution for all business management, logistics and production tasks in small and medium-sized companies.

The prerequisite for using WinLine cloud is multi-platform access to WinLine. The use of WinLine cloud is initially transparent according to the pay-per-use model. You only pay for the days on which you use the WinLine cloud. Billing takes place on a daily basis per user login.

Cost overview:

WinLine cloud	WinLine cloud+
Costs per login day and user:	
€ 5,70	€ 7,90

All prices in EUR including software maintenance, plus statutory VAT, excluding data centre services. Valid from 1.1.2024. A minimum charge applies for each named user login in a month: WinLine cloud € 22.80 or WinLine cloud+ € 31.60. Subject to changes and errors. Prerequisite: Windows operating system, internet access.

The use of software solutions in the cloud offers a whole range of advantages. These include, for example:

- + Time and location-independent WinLine access
- + Complete solution for all business areas
- + Immediate scalability of user and programme licences
- + Customisable, as private cloud model
- + Pay-per-use: transparent billing
- + Flexible contract terms

Advantages of using software in the data centre*:

- + No implementation & software maintenance effort
- + Always up-to-date thanks to automatic updates
- + Encrypted access, secure data storage
- + Automatic data backup
- + No investment costs in hardware through the use of external infrastructures
- + Unlimited capacities thanks to large storage volume

More information on WinLine cloud can be found on our website: www.mesonic.com.

* This list contains the services that are usually provided by data centres. Please check the offer of your data centre operator for the individually included services.

WORK FLEXIBLY WITH THE WINLINE CLOUD

With WinLine cloud, you can organise your business IT in the areas of accounting, controlling, purchasing, merchandise management, warehouse, CRM and production.

Basic module WinLine cloud

✓ FINANCES, ACCOUNTING - ACC1

Financial accounting is first and foremost a commercial information tool; it is practically the heart of every company. Because you can only manage what you can measure.

✓ ORDER ENTRY, INVENTORY MANAGEM. - ACC2

Only those who have administrative tasks efficiently under control can save themselves a lot of effort, costs and, above all, time. This is precisely why the WinLine ACC2 module controls the entire administration of your merchandise management, takes over the organisation and administration of your projects and monitors quality management.

✓ PRODUCTION PLANNING & CONTROL

From production planning to resource and capacity planning, WinLine PPS offers everything a classic series manufacturer needs. The graphical control centre and the simulation of production orders complete the range of functions.

✓ CRM & WORKFLOWS / MULTI-PLATFORM

With the integrated workflow management, you can create work processes in WinLine CRM that are customised to your company and run automatically. In addition, the CRM system is fully integrated into the WinLine ERP. This means that you have access to all important customer, product and market data at all times - whether in the web browser, via remote desktop or mobile devices.

✓ CAMPAIGN MANAGEMENT

Control and monitor your sales and marketing campaigns. Create, send and save serial mails and letters, lists and analyses. Individual templates, the inclusion of variables and integration into Microsoft Office solutions optimise handling.

✓ ARCHIVING

Archive your WinLine documents in our integrated archive system. You can summarise related transactions using links and „brackets“ and quickly find them again using the automated keywording.

✓ SYSTEM TOOLS

WinLine provides you with numerous tools for managing and administering the system. These include a wizard-supported list generator, the management information system, master data import/export and a form editor.

Advanced module WinLine cloud+

✓ ACC1+

Use the liquidity analysis to monitor the financial situation of your company and the payment behaviour of your debtors. With the extended dunning management function, you can shorten the payment channels of your customers.

✓ ACC2+

Here you have the opportunity to pick goods and create down payment and partial payment invoices.

✓ PPS+

If you are unable to carry out a specific execution in production yourself or your internal resources are fully utilised, external production supports you. Here you can manage the external assignment of production orders - generally or as required.

✓ BI+

Analyse your data systematically - on the basis of documents, articles, representatives, budgets, etc. or from a geographical perspective. And you can do this across all clients, financial years and applications. The results are clearly displayed in a dashboard and can be automatically reported within the company.

✓ MULTI+

Two-factor authentication ensures a high level of security for user access to WinLine.

✓ SYSTEM TOOLS+

These WinLine tools are helpful tools that make your daily work even easier: Define the individual access authorisation of users or groups and monitor auditing. Customise the screen masks to suit your requirements. Archive all receipts and documents - whether internal or external - in the WinLine. Run time-consuming analyses and services automatically at night or digitally record and process your incoming invoices quickly and automatically. All this and much more is possible with WinLine System tools+
