

MOBILE

✓ *Open up new opportunities for you and your company through increased mobility.*

Working online with mobile devices, independent of physical location, is rapidly changing today's business paradigm. Data processing in a mobile environment improves overall your company's agility, which in turn creates competitive advantages and generates higher margins.

The WinLine ERP suite from mesonic is well-equipped to use both in a local network as well as in a mobile environment.

MOBILE

Using WinLine mobile, you can call up and process data from the WinLine ERP and CRM software on your mobile device. You can generate vouchers, for example, or let customers sign orders and service reports using the signature function on a mobile

device. Service reports can include on-the-scene photos that are taken with on-board photo functions. The integrated bar code scanner lets you scan EAN or QR codes of WinLine products directly into your customer orders. Your external staff can use the route planning functions in the mobile solution. These examples illustrate just a few of the many useful applications that are offered by WinLine mobile.

All processing activities in WinLine mobile occur in real time, which means that all entered data and reports are available immediately on the local WinLine system. Retro-active data synchronization is not required. Internal company processing can be performed in perfect synchronization.

Data processing in WinLine mobile takes place in an app or in a browser that is opened on a mobile device. The display mode of WinLine mobile adjusts automatically to the type of mobile device, i.e., smart phone, phablet, tablet, netbook, or laptop. The display mode can be manually adjusted to one of the three available display variants.

Choose WinLine mobile as your solution for more mobility and flexibility in your company:

- + Real-time access to data from the WinLine central installation
- + Data access independent of time and location
- + Flexible display modes to fit respective device used
- + Customize user displays and reports to match your individual requirements
- + For management, sales force, service technicians, warehouse operators
- + Diverse and meaningful evaluations
- + High security via 2-factor authentication
- + Special functions: Barcode scanner, signature, push messages, GPS location, photo function

More information on WinLine mobile - Mobile Business can be found on our website at www.mesonic.com.
